UI-E-DXO is a cDNA library containing the following
tissue(s): fetal eyes. The library was constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand cDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded cDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT7T3-Pac
vector. The oligonucleotide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)18 tail. The
sequence tag for this library is AGANTCAGA. This library
was created for the program, Gene Discovery in the Visual
System, supported by National Eye Institute (NEI)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               68.9%; Score 290.6; DB 14; Length 719; 98.0%; Pred. tissues and their corresponding proteins. The invention also relates to cerebrods for assessing the expression level of these genes. The method cerebrods for assessing the expression level of these genes. The method cerebrods is used for testing the predisposition of mammals and preferably humans for a heart disease or for an acute state of such a disease. It is also cerebrody to treat diseases of the heart such as congestive heart failure, cerebrody, specific heart muscle disease, rhythm and conduction disorders, syncope and sudden death, coronary heart disease, systemic arterial cerebrody, pulmonary hypertension, pulmonary heart disease, systemic arterial cerebrody, pulmonary hypertension, pulmonary heart disease, are therapy. Cerebrody and sudden death heart disease, pericardial disease and cerebrody congenital heart disease, pericardial disease and cerebrody conduction conclumnan mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of the invention of the treatments of the streatments of the stre

C that is mapped to the human chromosome Xq21.3-q22. It comprises 5 exons.
C It is a member of the EF-Hand protein super family and is involved in comparison of the EF-Hand protein super family and is involved in comparison of the EF-Hand protein super family and skeletal comparison of the matter the differentiation of cells. Call comparison of the maintain muscle homeostasis. This sequence can be used in the comparison of the maintain muscle homeostasis. This sequence can be used in the comparison of the compari
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

```
The invention relates to a method of diagnosing (I) the onset or CC progression of benign prostatic hyperplasia (BPH), or screening (II) for or identifying an agent that modulates the onset or progression of BPH. The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate (CC prompared to normal prostate tissue. (I) comprises (CC detecting the expression levels of one or more genes in prostate cells (II) comprises preparing a first gene expression profile (CC prostate cells. (II) comprises preparing a first gene expression profile (CC agent, preparing a second gene expression profile of the agent exposed (I) is useful for diagnosing the first and second gene expression profiles. (CC cells, and comparing the first and second gene expression profiles. (CC is useful for diagnosing the onset or progression for BPH. The methods are useful to precent information identifying (CC level of genes given in the specification in the tissue or cells to the compared to the expression of gene in the database, and displaying the cell is compared to the expression level in a tissue or cells as the compared to the expression level in bPH. Agents using (II) are useful for compared to the expression level in BPH. Agents using (II) are useful for benign prostatic cancer. ABK64106-ABK64860 represent human than the intention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells from parient that are differentially regulated compared to normal prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 104; 444pp; English

The present invention describes a method (MI) for screening for an CC anti-neoplastic agent. The method involves exposing cells to a chemical CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL61664 CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC expression is indicative of anti-neoplastic activity and can be used for producing a product which CC is the data collected with respect to the anti-neoplastic agent as a CC is the data collected with respect to the anti-neoplastic agent as a CC result of MI, and the data is sufficient to convey the chemical CC expensions of cancer such as colon, breast, stomach, lung, thyroid, CC caccorona, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine CC carcinoma, papillary carcinoma and Wilm's tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene

                                                                                                                                                                                                                            CC The present sequence is the cDNA encoding the murine chisel gene (Cs1)
CC that is mapped to the mouse X chromosome. It is a member of the EF-Hand
CC protein super family and is involved in signalling pathways. It is
CC predominantly expressed in heart and skeletal muscles and is activated
CC of differentiation of cells. CS1 functions in regulation aspects
CC of differentiation or adaptive processes that maintain muscle
CC prophylactic and therapeutic treatment of diseases such as those
CC prophylactic and therapeutic treatment of diseases such as those
CC is also used in the treatment of muscular and functional activity. It
CC skeletal myopathies such as Duchenne muscular dystrophy and Becker's
CC myotonic dystrophy, heart failure, cardiac hypertrophy and Becker's
CC myotonic dystrophy, etc. The Cs1 gene sequence can also be used in gene
CC therapy, for the production of transgenic animals and for drug screening.

The patent discloses novel target genes abnormally expressed in heart tissues and their corresponding proteins. The invention also relates to methods for assessing the expression level of these genes. The method of is used for testing the predisposition of mammals and preferably humans of our analysis of the heart such a congestive heart failure, of useful to treat disease of the heart such a congestive heart failure, or dilative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiocomyopathy, specific heart muscle disease, rhythm and conduction disporders, typertransion, pulmonary heart disease, systemic arterial for hypertransion, pulmonary heart disease, valvular of endocarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention are useful for the development for medicaments for the treatments of the art disease. The present sequence is a cDNA from 66214 clone. This sequence used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAD27226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                              Identifying a subject at risk for a heart disease e.g. congestive heart failure, dilative cardiomyopathy, heart muscle disease, by quantifying the polypeptide expressed by genes abnormally expressed in heart tissue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; congestive heart failure; dilative cardiomyopathy; sudden death; hypertrophic cardiomyopathy; schaemic cardiomyopathy; rhythm disorder; heart muscle disease; conduction disorder; coronary heart disease; systemic arterial hypertension; pulmonary heart disease; valvular heart disease; pericardial disease; congenital heart disease; gene therapy; syncope; transgenic animal;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                            (gub-) transcriptome comprises messenger RNAs transcribed from multiple transcriptom units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or detecting RNA transcripts and splice variants of human or animal CC detecting RNA transcripts and splice variants of human or animal CC transcriptomes. The libraries may also be used as specialised minic CC detection of tissue- and pathological state, and so allowing the CC detection of tissue- and pathology-specific genes such as those genes conly expressed in specific tissue under a specific pathological CC condition; to detect developmental specific genes such as those genes CC condition; to detect developmental specific genes; and to detect RNA CC transcripts and splice variants of a transcriptome of a patient suffering CC condition; to detect developmental specific genes; and to detect RNA CC cranscripts and splice variants of a transcriptome of a patient suffering CC digonucleotide sequences from rats, humans and mice, which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; splice
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human spliced transcript detection oligonucleotide SEQ ID NO:22137
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ABN49389 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription a genome, useful for detecting tissue-, pathology-, and developmental-specific genes -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            15-JUL-2002 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                       The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and necular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid eukaemia, Alzheiner's disease, AIDS, epilepsy, neurofibromatosis, theumatoid arthritis, psoriasis and inflammatory/ulccrative bowel

                     The present invention describes a method of screening for genes which modulate polyglutamine toxicity using animal models with polyglutamine sequences that cause toxicity in the animal. The model is preferably prosophila, and toxic polyglutamine sequences include the human and (TPR2) and myeloid leukaemia factor 1 (MLF) genes. The model is useful for identifying treatments for neurodegenerative and proliferative disorders, including Alzheimer's disease, Parkinson's disease, Creutzfeldt-Jacob's disease (CJD), bovine spongiform encephalopathy (BSE), Huntington's disease, Machado-Joseph disease, spinocerebellar ataxias, dentatorubropallidoluysian atrophy, Kennedy's disease, stroke, head trauma and cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        pharmaceutical;
 14133
                                                                                                                                                                The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL101840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                       23-MAR-2000; 2000US-191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                14253
                                                                                                                                                                                                                                                              The invention relates to a recombinant entomopox virus (EPV) vector, comprising a polynucleotide encoding a protein operably linked with a heterologous promoter sequence. The invention also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polynucleotide encoding a protein to a vertebrate cell preferably a mammalian cell, such as a human cell. The vector is introduced into the vertebrate cell by infection in a viral particle, or by transfection, transduction, or injection either in vitro or in vivo. The vector is useful for the delivery and expression of invivo. The vector is useful for the delivery and expression of

                                                    biologically useful proteins in gene therapy protocols, and for delivering large DNA segments for engineering of vertebrate cells. Polymuclectides of the invention have applications in techniques such as polymucles insertion sites for foreign genes of interest, hybridisation their use as insertion sites for acapting, in PCR technologies, and in the production of sense or antisense nucleic acids. Vectors of the invention production of stable integration and expression of heterologous DNA in host cells, and are adapted for accepting large heterologous polymucleotide inserts which can be delivered in an infected or transformed cell and expressed in a stable fraction. The current sequence represents a fragment of the genome of the genus B entomopoxvirus from amsacta moorei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant entomopox virus vector useful for delivering polynucleotide encoding protein to vertebrate cell, comprises polynucleotide encoding protein operably linked with heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           147

```
cc by chromosome 2 of the human malarial parasite, Plasmodium falciparum.

CC vaccines against P. falciparum infection comprising (I) or (II), and (2)

CC (I) and (II) are useful for the development of vaccines against P. falciparum infection comprising (I) or (II).

CC (I) and (II) are useful for the development of vaccines against CC (II) and (II) are useful for the development of vaccines against CC (II) and polyclomal antisers or a monoclonal CC useful in the detection of infection with P. falciparum. Furthermore, CC (II) (specially when they are rifins or secreted or membrane proteins)

CC infection, or they can be used to identify drug resistance in CC infection. Sequencing of the Plasmodium chromosome 2 and the CC complexity of the parasitic lifecycle, and provide new targets for CC complexity of the parasitic lifecycle, and provide new targets for CC complexity of the parasitic lifecycle, and provide new targets for CC resistance to insecticides have led to a resurgence of malaria in many CC parts of the world, and there is a pressing need for vaccines and new CC and protein sequences given in the present invention, but which are not CC specifically mentioned within the present invention, but which are not CC specifically mentioned within the present invention, but which are not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RESULT 13

sequence of the Methanococcus jannaschii circular chromosome. The CC genome sequence. The invention also describes a computer based system CC genome sequence. The invention also describes a computer based system CC for identifying fragments of the M. jannaschii genome that are CC homologous to target nucleotide sequences, comprising: (a) data storage means comprising the nucleotide sequence of the 1664976, 58407 or 1650 cc means comprising the nucleotide sequence of the 1664976, 58407 or 1650 cc sequence (see AAV21209, AAV21210 and AAV21211), or a nucleotide target sequence (see AAV21209) a AAV21210, or a nucleotide cc target sequence (see AAV21209) and (c) retrieval means for comparing a cc identify a homologous sequence, and (c) retrieval means for obtaining cc inhomologous sequence. The method, which is based on whole genome cc for which consists of 3 physically distinct elements, a large circular ctra-chromosoma lement (the 58407 by sequence given in AAV21210), and created the consists of 3 physically distinct elements in AAV21210), and created the consists of a sequence given in AAV21210), and created the consists of a sequence given in AAV21210), and consists of a consist of a sequence given in AAV21210), and consists of a consist of a sequence given in AAV21210), and consists of a consist of a sequence given in AAV21210), and consists of a consist of a c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       234
The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and

                                                                                                                                                                                                                                                                                                                                                                                                                                                        This clone was mapped by Grieff, M., Whyte, M. P., Thakker, R. and Mazzarella, R. Sequence analysis of 139 kb in Xp22.1 containing spermine synthase and the 5' region of PEX. Genomic 44:227-231 (1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencing problems, such as compressions and repeats; all regions were covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT, Tr., TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at thitp://www.sanger.ac.uk/Projects/C_legans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX
RP11-450P7 is from the library RPCI-11.2 constructed by the group of Pister de Jong. For further details see

                                                                                                                           NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank draft data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (bases 1 to 188670)

* NOTE: Estimated insert size may differ from sequence length
    (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 46 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Web site: http://www.hgsc.bcm.tmc.edu/

Center project Information
Center project name: GEGR
Center clone name: CH230-2911
Sequencing vector: Plasmid;
Chemistry: Dye-terminator Big Dye: 100% of ref
Assembly program: Phrap; version 0, 990329
Consensus quality: 35907 bases at least Q40
Consensus quality: 40324 bases at least Q30
Consensus quality: 44113 bases at least Q20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             as soon as it be preserved.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DB seq length: 0

Sequence 111, Application US/09484970B

Patent No. 6426186

GENERAL INFORMATION:

APPLICANT: Jones, Karen A.

APPLICANT: Walker, Michael G.

TITLE OF INVENTION: BONB REMODELING GENES

FILE REFERENCE: PB-0014 US

CURRENT APPLICATION NUMBER: US/09/484,970B

CURRENT FILING DATE: 2000-01-18

NUMBER OF SEQ ID NOS: 172

SOFTWARE: PERL Program

LENGTH: 909

TYPE: DNA

ORGANISM: Homo sapiens
FEATURE:

NAMEKEY: misc feature

OTHER INFORMATION: Incyte ID No. 6426186 0216
